ANNUAL INDEX NUCLEONICS /1960

HOW TO USE THE INDEX

The 1960 NUCLEONICS index is in two principal sections -- a subject index and an author index. Every technical article and all news stories of more than passing interest or more than one paragraph in length have been indexed. Each item is indexed under from one to four appropriate headings in the subject index. Every authored article is indexed under each of its authors in the author index. Because of publication deadlines the December News section has not been indexed.

The subject index is alphabetical, but in addition, each category carries a category number. The category numbers increase numerically as one goes along in the alphabet. The purpose of the category number is to simplify cross-referencing: many of the subject headings contain references to other categories; rather than spell these out the category numbers are given.

Countries are indexed individually, as are organizations and companies. The category labelled "industry" should be scanned for stories referring to industry generally. Elements can be found under their names.

Abbreviations used in the index refer to NUCLEONICS editorial departments, as follows: *AR*, Applied Radiation; *Edit*, editorials; *IM*, Instrumentation and Measurements; *NR*, Nuclear Reactions (Letters); *NE*, Nuclear Engineering; *RR*, Reactor Roundtable; *RN*, Russian Nucleonics; *TH*, Thermonucleonics.
